

10 REASONS WHY YOU SHOULD GO SOLAR

Though Solar technology has been around since the 1960's, it hasn't been truly affordable for the average homeowner until more recently. Though the technology hasn't evolved much, modern financing options have. For this reason, switching to solar has become more and more popular with each passing month. In fact, the current national statistic is that someone converts to solar energy every 3 minutes in our country alone.

If you own your own home and have never thought about making the change, you should. In fact, here are 10 reasons why:

First, there are 6 compelling **FINANCIAL REASONS** for you to switch to solar.

- 1) You will start saving money from day ONE. 99.9% of the time, your monthly solar bill will be cheaper than your current electricity bill. Seriously. The moment we turn it "on," you save money. Literally. It's not too common to purchase a home improvement item that does this.
- 2) You will save TENS of thousands of dollars over the next 30 years! Saving a few dollars each month adds up and in the end you'll be amazed at the total savings that solar can bring!
- 3) Every time you pay your current electric bill, you are padding the pocket of some rich executive. Isn't it time you started paying yourself?
- 4) Become debt free. No one likes to be in debt to anyone. Do you realize that you can never "pay off" your current electricity bill? With solar, you can!
- 5) Increase your home's value instantly. Unlike a swimming pool addition or bathroom remodeling project, solar will always increase the value of your home. Immediately.
- 6) There is no better or more stable investment than with solar. Stock market is risky. Real estate can be risky. Solar is steady and stable because we all know that the sun will always rise and that electricity will always be needed. The ROI on your purchase is a lot quicker than you think.

If the financial reasons were not motivation enough, there are many **ENVIRONMENTAL REASONS** why you should switch to solar. Here are the top four:

- 1) Solar energy is renewable energy! You'll never need to worry about if the sun will be around in 20 years. In fact, if the sun does run out, you'll have other things more pressing to consider than your electricity. ;)
- 2) Solar energy is clean energy! No pollution! No noise!
- 3) Everyone is more concerned with going "green" today. Nothing is more green than the orange Sun! Reduce your carbon footprint and help the environment!
- 4) Achieve energy independence! When your neighbors complain about the rate increases they are having to pay, you can just smile and enjoy your independence.

If you have never considered solar to supply your personal electricity needs, do so today.

If you would like a free phone consultation or on-site visit, contact us!
We look forward to showing you how Solar is right for you and your wallet!
